

Population

For every 1,000 residents in July 2017, Texas added 13.4 new residents by July 2018, including 6.7 net births, 3.7 net international migrants and 2.9 net domestic migrants (*Chart 6*). Austin's net domestic migration rate led the state's major metros in the year, while McAllen had the highest rate of natural increase (births minus deaths) and Houston had the fastest net international migration rate. Houston, McAllen and El Paso all posted negative net domestic migration—more people leaving for other regions in the U.S. than arriving from other places in the U.S.
