### Comments

These comments have been edited for publication.

# Beverage and Tobacco Product Manufacturing

We had very weak sales in September and even worse in October. We are attributing it to all the rain. November sales have rebounded and are slightly ahead of plan. We are building inventory before year-end price increases from suppliers.

# Petroleum and Coal Products Manufacturing

We have seen a slight uptick in the level of interest from the private sector in the past 30 days, which had been nonexistent over the past 12 months. The interest is in the form of proposals and not contracts, so we'll see what happens.

# **Chemical Manufacturing**

We have been looking at a potential acquisition and have found the banking industry very difficult to work with. Everyone wants to tie a credit line to fees from ancillary services such as credit cards, 401(k) management, etc. This is true even on a participation deal that might include three to four banks, which makes it hard to satisfy everyone.

Texas Manufacturing Outlook Survey, November 2009 - Economic Data - FRB Dallas

#### Nonmetallic Mineral Product Manufacturing

We continue to believe that housing and general economic conditions will improve slightly in 2010.

# **Primary Metal Manufacturing**

Our two basic markets continue to be building/construction and transportation. Both of these markets remain significantly off. Within our industry, 29 plants, representing an estimated 10 percent of capacity, have been closed since 2007. More closures are expected during the traditionally slow winter months.

### **Fabricated Metal Product Manufacturing**

There is surprisingly very little activity. For the small amount of bid work received in the past 30 days, pricing to obtain work is well below cost. Larger requests for quotation (RFQs) are for inclusion in budgets or estimates for future work; these bids are not for actual work to be awarded anytime in the next quarter or possibly the next six months but are accommodations for the owner or construction management companies.

### **Machinery Manufacturing**

We are very cautious about the overall economy and don't see natural drivers for a recovery. Regarding our business, we are cautiously optimistic that demand levels will improve somewhat (10 percent +/-) due to underinvestment in maintenance by our customers over the past year.

# Furniture and Related Product Manufacturing

We see fewer retailers going out of business, but payment rates are worse, which is worrisome as more retailers may be on the brink of failure. As our efficiencies improve, we require fewer employees. Retail sales are not improving, either because of lack of credit or no sales. We have lost over 100 accounts in the past year.

### **Miscellaneous Manufacturing**

Our export business continues to hold up pretty well.

Questions regarding the Texas Manufacturing Outlook Survey can be addressed to Laila Assanie at laila.assanie@dal.frb.org.
