Texas Economic Performance and Outlook
(March, 2023)
“Employment Growth Still Strong, Inflation Too High”

Pia Orrenius and Luis Torres
Federal Reserve Bank of Dallas
3/24/2023

DISCLAIMER: The views expressed are the authors’ and do not necessarily reflect the views of the Federal Reserve Bank of Dallas or Federal Reserve System.
Texas employment grew 4.6 percent in February, and January growth was revised slightly down to 5.5 percent.

- Texas is growing faster than the nation (U.S. job growth was 2.4 percent in February).

The Dallas Fed’s Texas Employment Forecast indicates that jobs will increase 2.8 percent in 2023.

- Despite strong jobs data, the Texas Business Outlook Surveys (TBOS) are mixed, with manufacturing contracting in February while the service sector grew at a modest pace.
  - TBOS company outlook worsened but, surprisingly, less than one-third of survey participants expect demand to fall in 2023.

- Most concerning to the outlook is price pressures, which show few signs of receding in either the payroll data or the surveys; the latest inflation data have also been high.
  - Persistent price pressures may lead to additional monetary policy tightening, which will further slow activity in housing and construction, and dampen investment and consumer demand.

What’s New: Labor market strength contrasts with slowing activity.
Overall Economic Activity
Texas employment remains strong in February but gains in services mask losses in the goods sector

NOTES: Data are seasonally adjusted and rates are annualized. Numbers in parenthesis indicate share of total state employment in February 2023.

Texas
U.S.

SOURCE: Indeed.
New business applications increased sharply during the pandemic, remain elevated.

NOTE: Data through March 19.
SOURCES: U.S. Census Bureau.
Outlook for 2023
The Texas Employment Forecast indicates that jobs will increase 2.8 percent in 2023.

NOTE: The Dallas Fed Texas Employment Forecast is based on the average of four models. Three models are VARs where Texas payroll employment is regressed on WTI oil prices, the US leading index and the Texas leading index, respectively. The fourth model is a regression of payroll employment on lags of payroll employment, expectations for U.S. GDP growth, and WTI oil prices, and four COVID-19 dummy variables (March-June 2020).
While a shrinking share of Texas firms is raising prices and wages, it is still far above average, pointing to continued high inflation.

---

NOTE: Percent reporting increase was constructed by weighing the respective component of TMOS, TSSOS, and TROS according to GDP shares. Data through Feb. 2023.

CPI Inflation in Texas declining but still too high

NOTES: Texas CPI data through February 2023
SOURCES: Bureau of Labor Statistics
Share of Texas firms reporting an increase in operating margins in the past six months rose

NOTE: Respondents were asked, "How has your firm's operating margin, defined as earnings before interest and taxes (EBIT) as a share of total revenue, changed over the past six months?"

Share of Texas firms expecting an increase in operating margins in the next six months also rose

NOTE: Respondents were asked, "How do you expect your firm's operating margin, defined as earnings before interest and taxes (EBIT) as a share of total revenue, to change over the next six months?" (n=400).

What recession? Texas firms are expecting an increase in demand in 2023

NOTE: Respondents were asked, "How do you expect demand for your firm’s goods and/or services this year to compare with 2022?"
