Conference to Consider Texas Residential Real Estate amid Oil Slump

Texas has experienced a strong multifamily housing recovery following the Great Recession, while single-family construction has been constrained by a number of factors. New-home supply now trails demand, leading to unprecedented price appreciation and record-low inventories.

The Federal Reserve Bank of Dallas and the Real Estate Center at Texas A&M University will sponsor a one-day conference, "Finding Shelter: Assessing Texas Residential Real Estate amid the Oil Slump," on Feb. 12 at the Dallas Fed.

The conference will consider what's ahead for the Texas residential market in 2016. Participants will explore trends and challenges, with a focus on supply constraints that have limited the expansion of single-family real estate inventory. Additionally, experts will discuss prospects for the U.S. and Texas economies and address the role of the real estate and energy sectors following the recent oil price collapse.

For more information, see the Research Events listing on the Dallas Fed website.
